

Getting started with your computer

A blue arrow pointing downwards is positioned above the text.

Computers are equipped with a simple pre-integrated setup program to keep everything running smoothly. The getting started information below will provide you with resources and information that you may find useful during this process. This information also contains important links to tools and pages on our support site in case you need help.

Here are the actions for connecting your PC:
you have to unpack the equipment.

Is it an easy task? Normally yes, but we will guide you through this process so that you do not miss any details and do not throw away important items.

Carefully open the outer box.

Remove all the packages inside.

Put the PC in the place to reserve

Plug the USB keyboard and mouse into the two rear USB ports of UC

Connect the screen with the power cable then the display cable in the port of the CPU

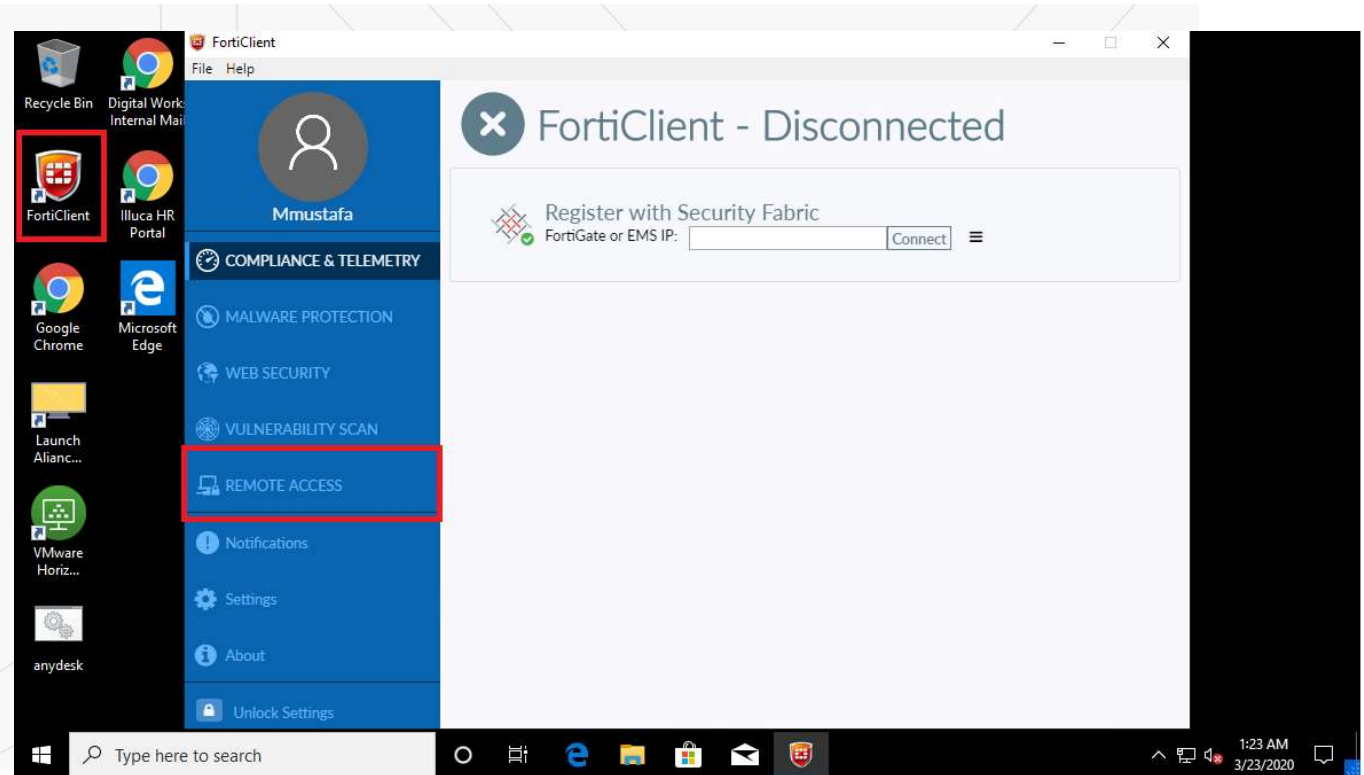

Plug the Network cable into the Internet Router.

Connect the CPU to the power supply and start your Computer.

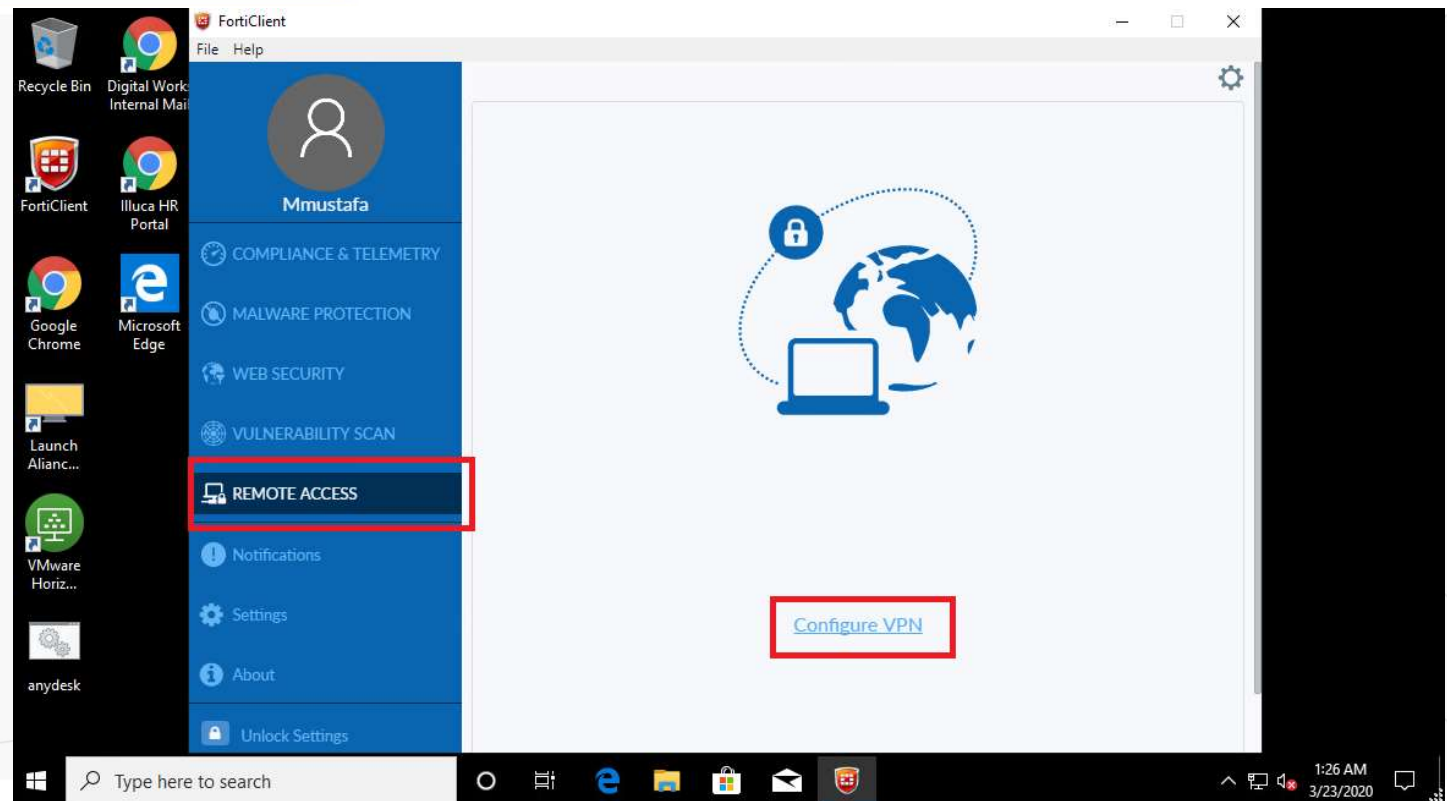

Do not throw away any packaging until you are sure everything is working

First : Navigate into Forclient VPN Icon
on your desktop and run it.
Then choose REMOTE ACCESS

Choose Configure VPN

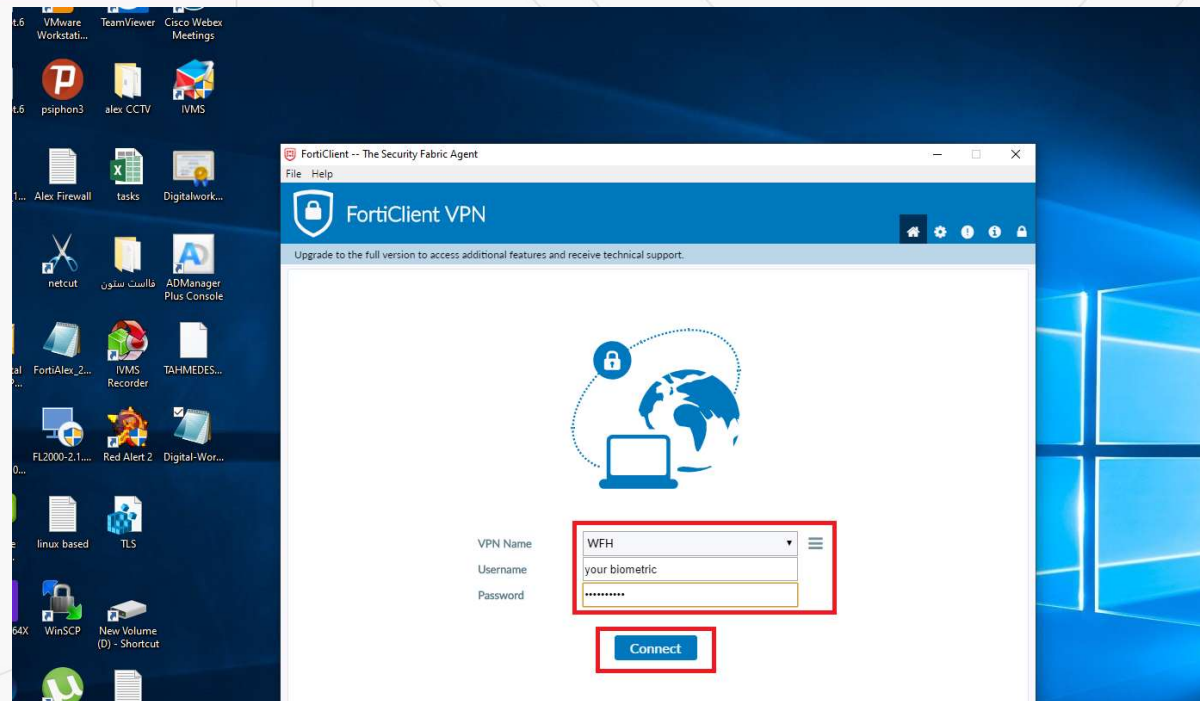

Make sure to add the configs as in the below and click save

The screenshot shows the 'Edit VPN Connection' window in FortiClient. The window title is 'FortiClient -- The Security Fabric Agent'. The main title is 'FortiClient VPN'. Below the title bar, there is a message: 'Upgrade to the full version to access additional features and receive technical support.' The window contains the following fields and options:

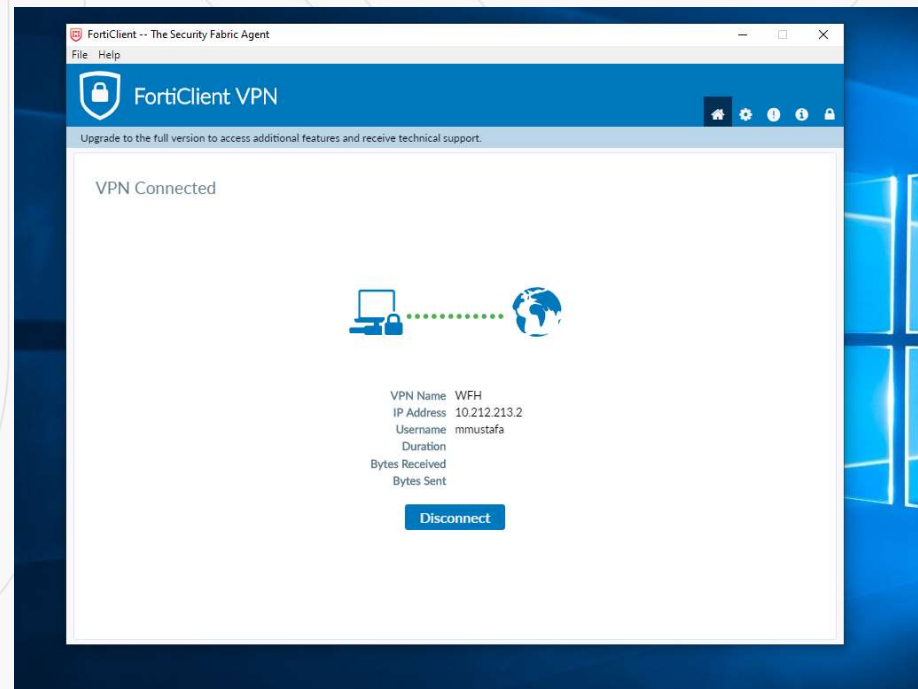

- VPN:** Two tabs, 'SSL-VPN' (selected) and 'IPsec VPN'.
- Connection Name:** Text field with 'Alex' entered.
- Description:** Empty text field.
- Remote Gateway:** Text field with '156.200.99.150' entered.
- Under Remote Gateway:** A checkbox labeled 'Customize port' is checked, and the port number '4433' is entered in the adjacent field.
- Client Certificate:** A dropdown menu with 'None' selected.
- Authentication:** Two radio buttons, 'Prompt on login' (unselected) and 'Save login' (selected).
- Username:** Text field with 'mmustafa' entered. A red arrow points to this field from the left. A red text annotation 'should be your biometric' is written next to the username.
- Do not Warn Invalid Server Certificate:** A checked checkbox.
- Buttons:** 'Cancel' and 'Save' buttons at the bottom.

Red annotations include boxes around the 'SSL-VPN' tab, 'Connection Name', 'Remote Gateway', 'Customize port' checkbox, 'Save login' radio button, and 'Username' field. A red arrow points to the 'Username' field from the left. A red text annotation 'should be your biometric' is written next to the username.

Write down your biometric and the username box and enter your password then press connect

Now you're connected as in the below

You can open your applications as usual 😊
