

Getting started with your computer

The background of the slide features a light gray field with large, faint, overlapping geometric shapes, including a large 'U' on the left and various lines and curves on the right. A small blue arrow points down towards the word 'will' in the text.

Computers are equipped with a simple pre-integrated setup program to keep everything running smoothly. The getting started information below will provide you with resources and information that you may find useful during this process. This information also contains important links to tools and pages on our support site in case you need help.

Here are the actions for connecting your PC:
You have to unpack the equipment.

Is it an easy task? Normally yes, but we will guide you through this process so that you do not miss any details and do not throw away important items.

Carefully open the outer box.

Remove all the packages inside.

Put the PC in the place to reserve

Plug the USB keyboard and mouse into the two rear USB ports of UC.

Connect the screen with the power cable then the display cable in the port of the CPU

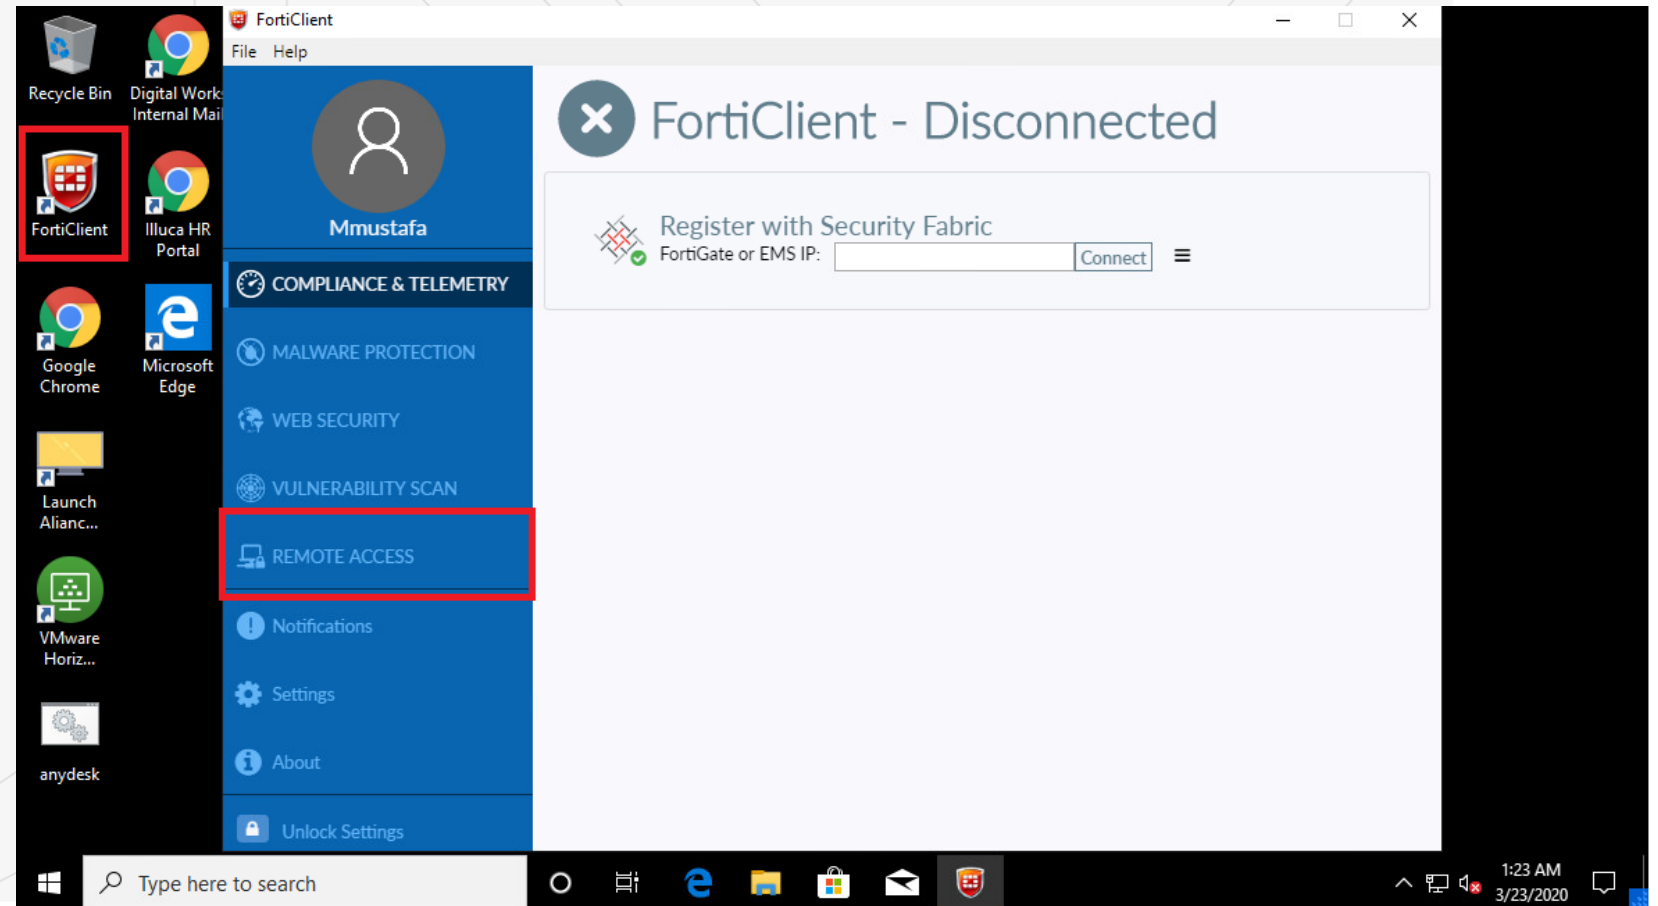

Plug the Network cable into the Internet Router.

Connect the CPU to the power supply and start your Computer.

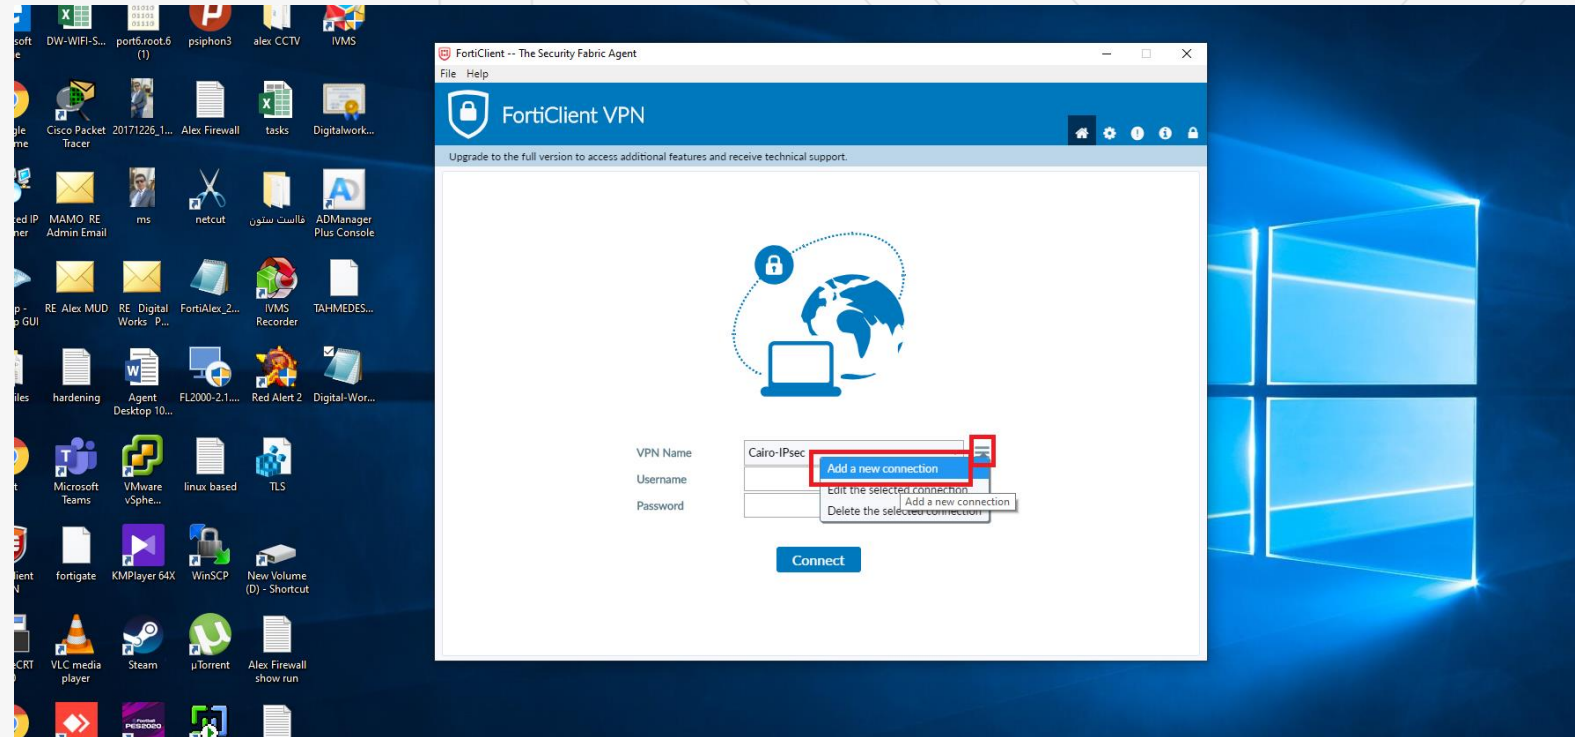

Do not throw away any packaging until you are sure everything is working

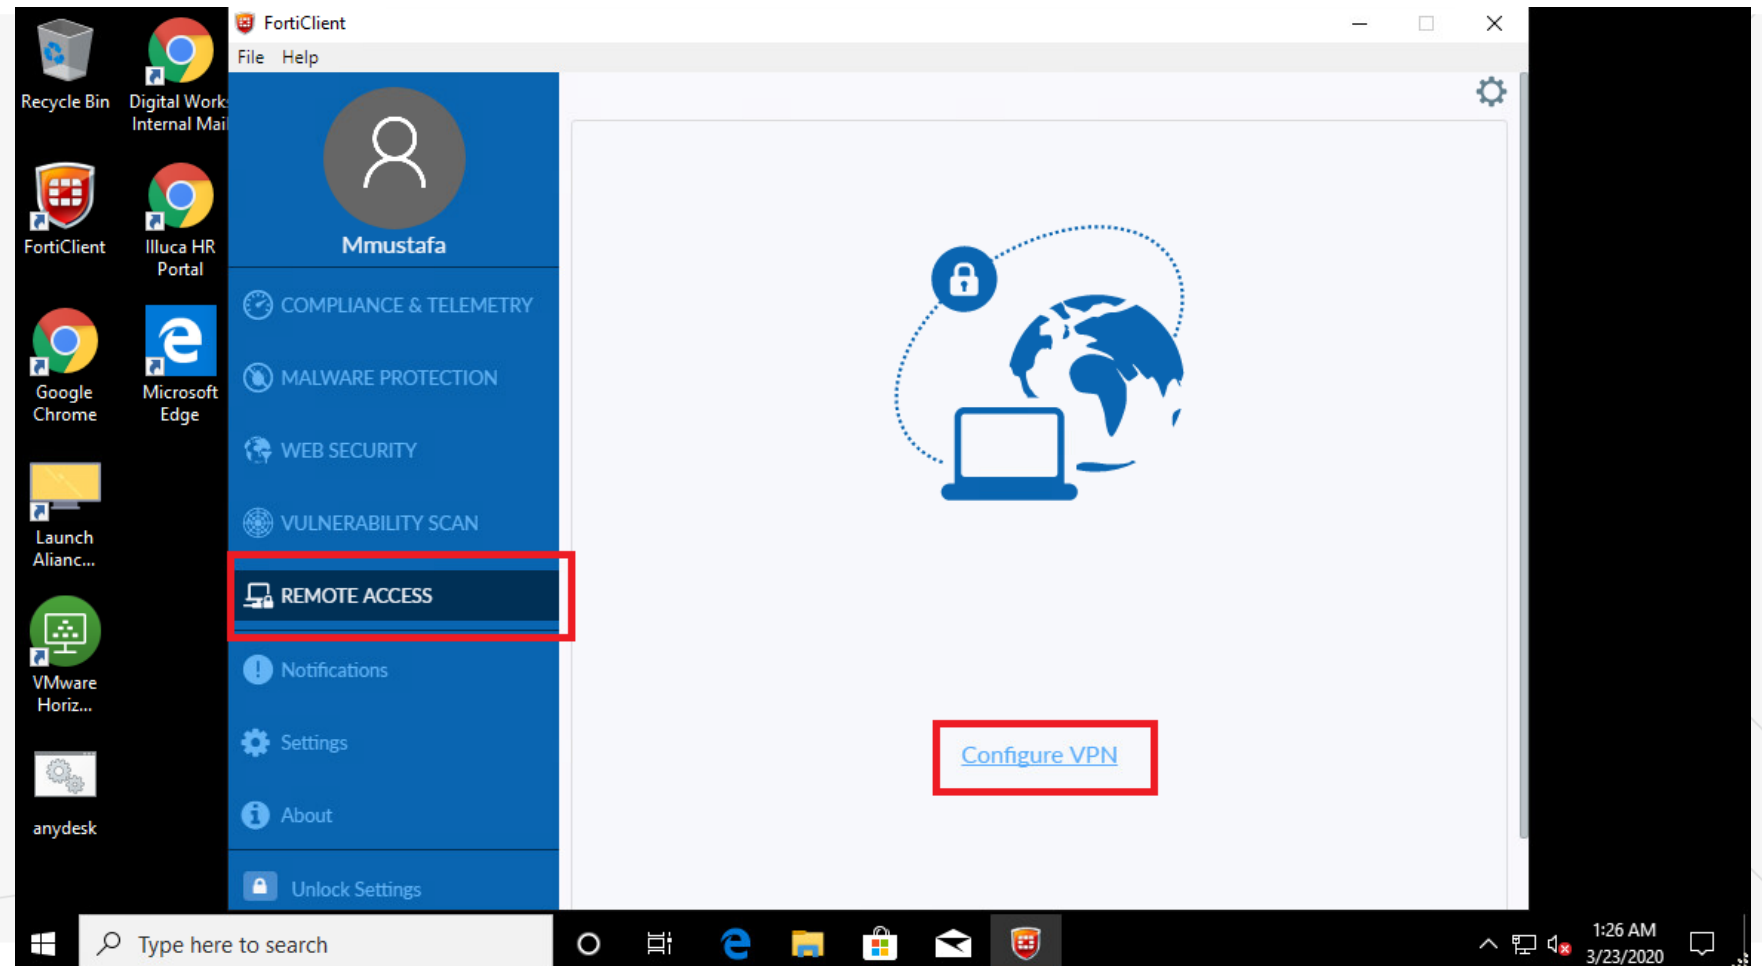

First : Navigate into FortiClient VPN Icon
on your desktop and run it.
Then choose REMOTE ACCESS

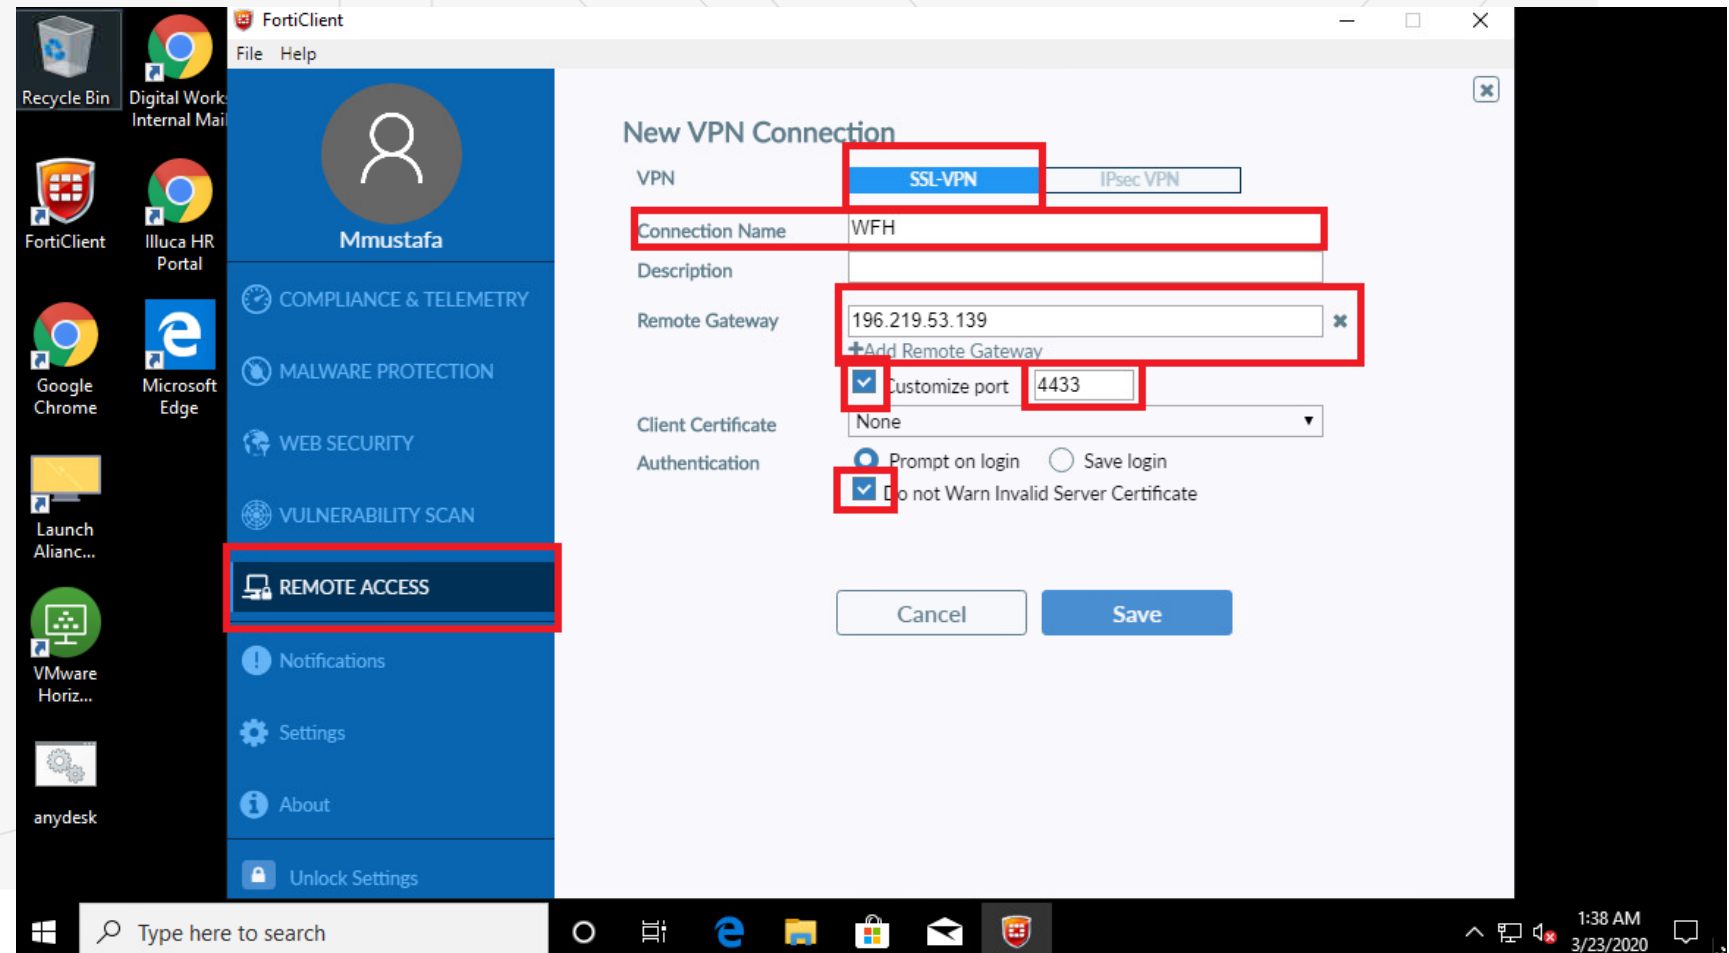

Navigate to the option bottom
and choose add a new
connection

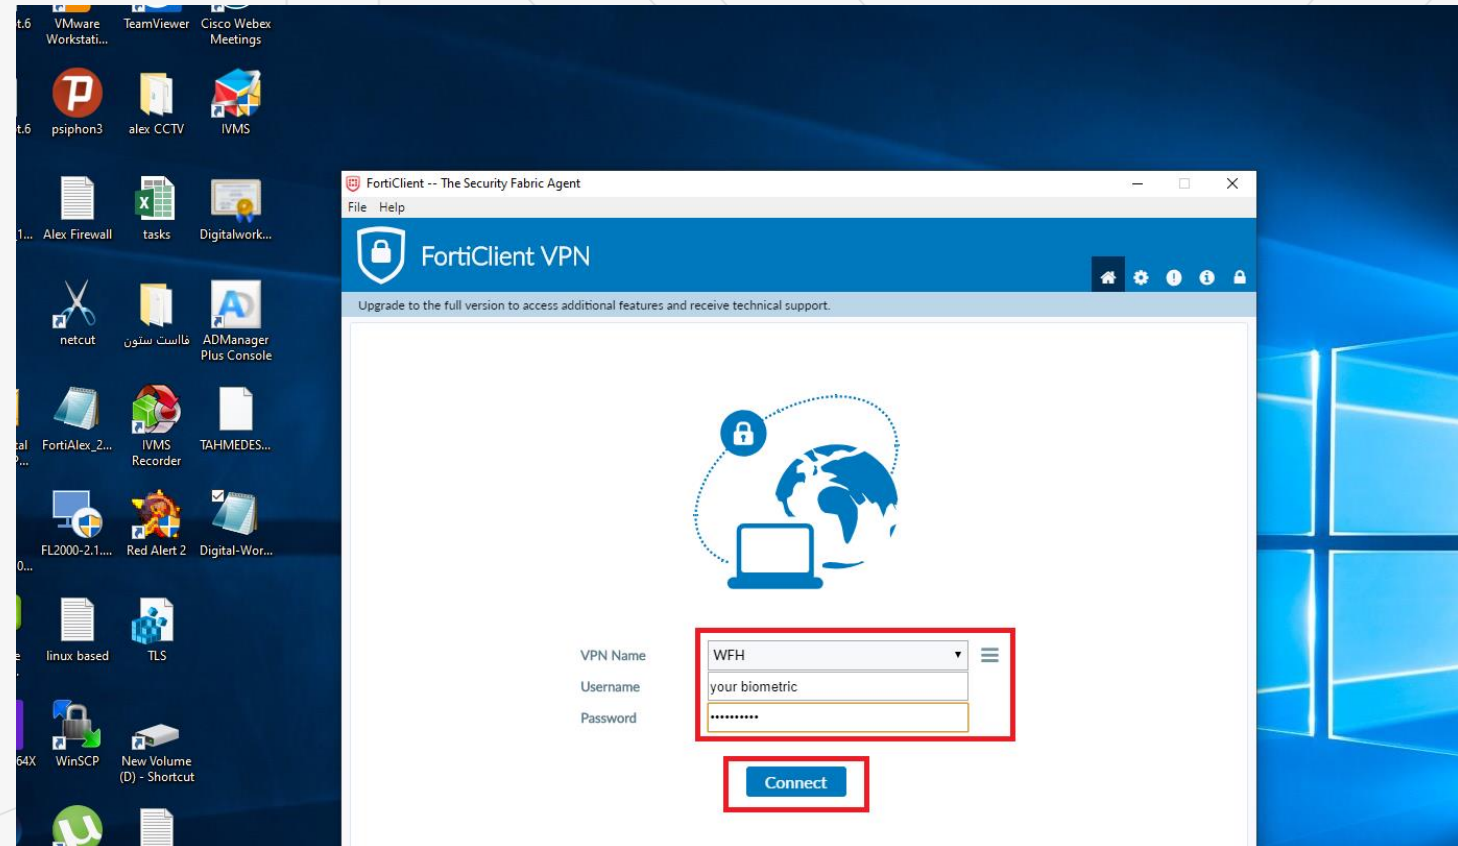

Choose Configure VPN

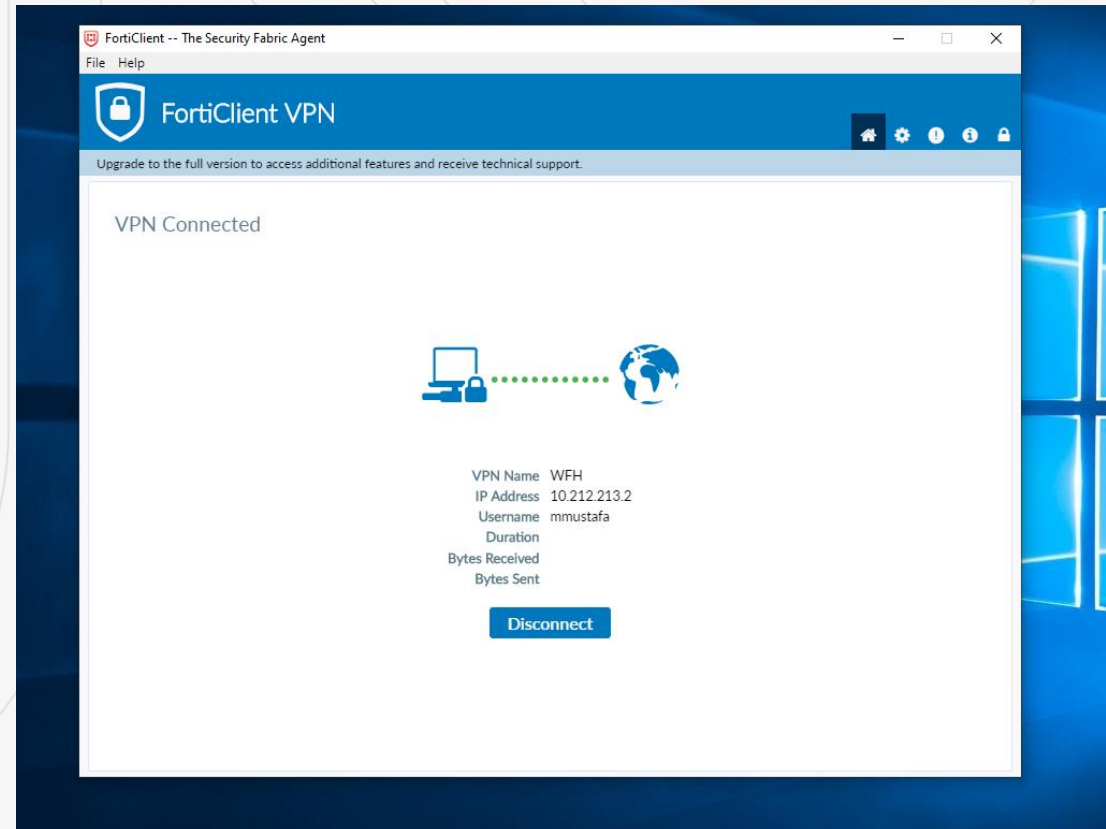

Make sure to add the configs as in the below and click save

Write down your biometric and the username box and enter your password then press connect

Now you're connected as in the below

You can open your applications as usual 😊
